DETAILED ACTION

Response to Amendment

1. Applicant's arguments with respect to claims 1-9 have been considered but are not persuasive.

In response to Applicants' argument, filed 1/12/06, page 5, that "the cited portion does not disclose transmitting the pilot strength measurement message from the mobile terminal at a second transmit power level". The Examiner respectfully disagrees. Bonta et al. disclose in the flowchart figure 3, steps 601 through 609 wherein mobile send normal PSMM is the first PSMM at first power level, the flowchart then go back to point B and beginning from step 602 through figure 4, step 632 wherein mobile sends rescue PSMM is the second PSMM at maximum power level, also see col.7 lines 35-36, which the power level of PSMM step 632 is greater than the power level of PSMM step 627.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-6 and 8-9, are rejected under 35 U.S.C. 102(e) as being provisional anticipated by Bonta et al. (US Patent 6,337,983).

Application/Control Number: 09/755,207

Art Unit: 2684

Regarding claims 1 and 6, Bonta et al. discloses a method for call recovery comprising:

transmitting a pilot strength measurement message from a mobile terminal at a first transmit power level (col.11 lines 17-18);

waiting a predetermined time period (see col.11 lines 23-24); and
transmitting the pilot strength measurement message at a second transmit power
level, wherein the second transmit power level is greater than the first transmit power level

(see col. 13 lines 44-46).

Regarding claim 4, Bonta et al. disclose a method comprising:

Initiating a call recovery from a mobile terminal (see col.3 lines 10-11); and Incrementing a transmit power level from a mobile terminal (see col.3 lines 10-14) prior to receiving (see col.3 lines 15-17) a hand-off direction message (col.5 lines 17-37).

Regarding claim 2, Bonta et al. discloses the second transmit power level is a maximum transmit power level (see col.7 lines 35-36).

Regarding claim 3, Bonta et al. disclose a computer program stored on a computer readable medium (see col.1, a computer program is inherent in a computer readable medium such as mobile device and base station).

Regarding claim 4, the modified Chheda et al. discloses everything as claim 1 above. More specifically, the modified Chheda et al. disclose incrementing a transmit power level prior to receiving a hand-off direction message (see Chheda et al. col.11 lines 3-22).

Regarding claim 5, Bonta et al. disclose transmitting a pilot strength measurement message at each transmit power level (see col.11 lines 12-40).

Application/Control Number: 09/755,207

Art Unit: 2684

Regarding claim 6, Bonta et al. disclose the pilot strength measurement messages are transmitted at predetermined time intervals (see col.11 lines 36-40).

Regarding claim 8, Bonta et al. disclose a mobile terminal apparatus comprising:

Increment transmit power of a pilot strength measurement message from the mobile terminal during call recovery (see col.11 lines 29-40),

After waiting the predetermined time period (see col.11 lines 36-40), transmit the pilot strength measurement message from the mobile terminal at a second transmit power level wherein the second transmit power level is greater than the first transmit power level (see col.11 lines 31-32).

Bonta et al. disclose a cellular communication system, signaling and voice or data communication between mobile communication units and fixed communication unit (the mobile units are inherent include antenna, a processor, transmitter and software instructions to achieve functions of varying transmission power levels for hand-off procedures as describes by Bonta et al., see col.1 lines 15-34).

Regarding claim 9, Bonta et al. disclose maintain the transmit power below a maximum power level (see 627, 628, fig.4).

4. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bonta et al. in view of Dalal (US Paten 6,633,554).

Regarding claim 7, Bonta et al. fail to disclose the pilot strength measurement message includes a preamble message.

Dalal disclose the pilot strength measurement message includes a preamble message (see col.7-20). Therefore, It would have been obvious to one of ordinary skill in

Art Unit: 2684

the art at the time the invention was made to modify the system of Bonta et al. with the above teaching of Dalal in order to provide a preamble message to be transmitted over traffic channel).

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed Tu Nguyen whose telephone number is 571-272-7883. The examiner can normally be reached on Monday through Friday from 6:30AM-2:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban, can be reached at (571) 272-7899. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
